

Jade 78131

8-channel 250 MHz A/D with DDCs
PCIe board with Kintex UltraScale FPGA

Complete radar and software radio interface solution

- Radar and software radio receiver
- Communications receiver
- Analog signal interface for data recording
- Wideband data acquisition
- Remote monitoring
- Sensor interfaces

The Jade® 78131 is a multichannel, high-speed data converter with multiband DDCs (digital downconverters). It is suitable for connection to HF or IF ports of a communications or radar system. Its built-in data capture feature offers an ideal turnkey solution as well as a platform for developing and deploying custom FPGA-processing IP.

It includes eight A/Ds, a complete multiboard clock and sync section and a large DDR4 memory. In addition to supporting PCI Express Gen. 3 as a native interface, the 78131 includes optional high-bandwidth connections to the Kintex UltraScale FPGA for custom digital I/O.

FEATURES

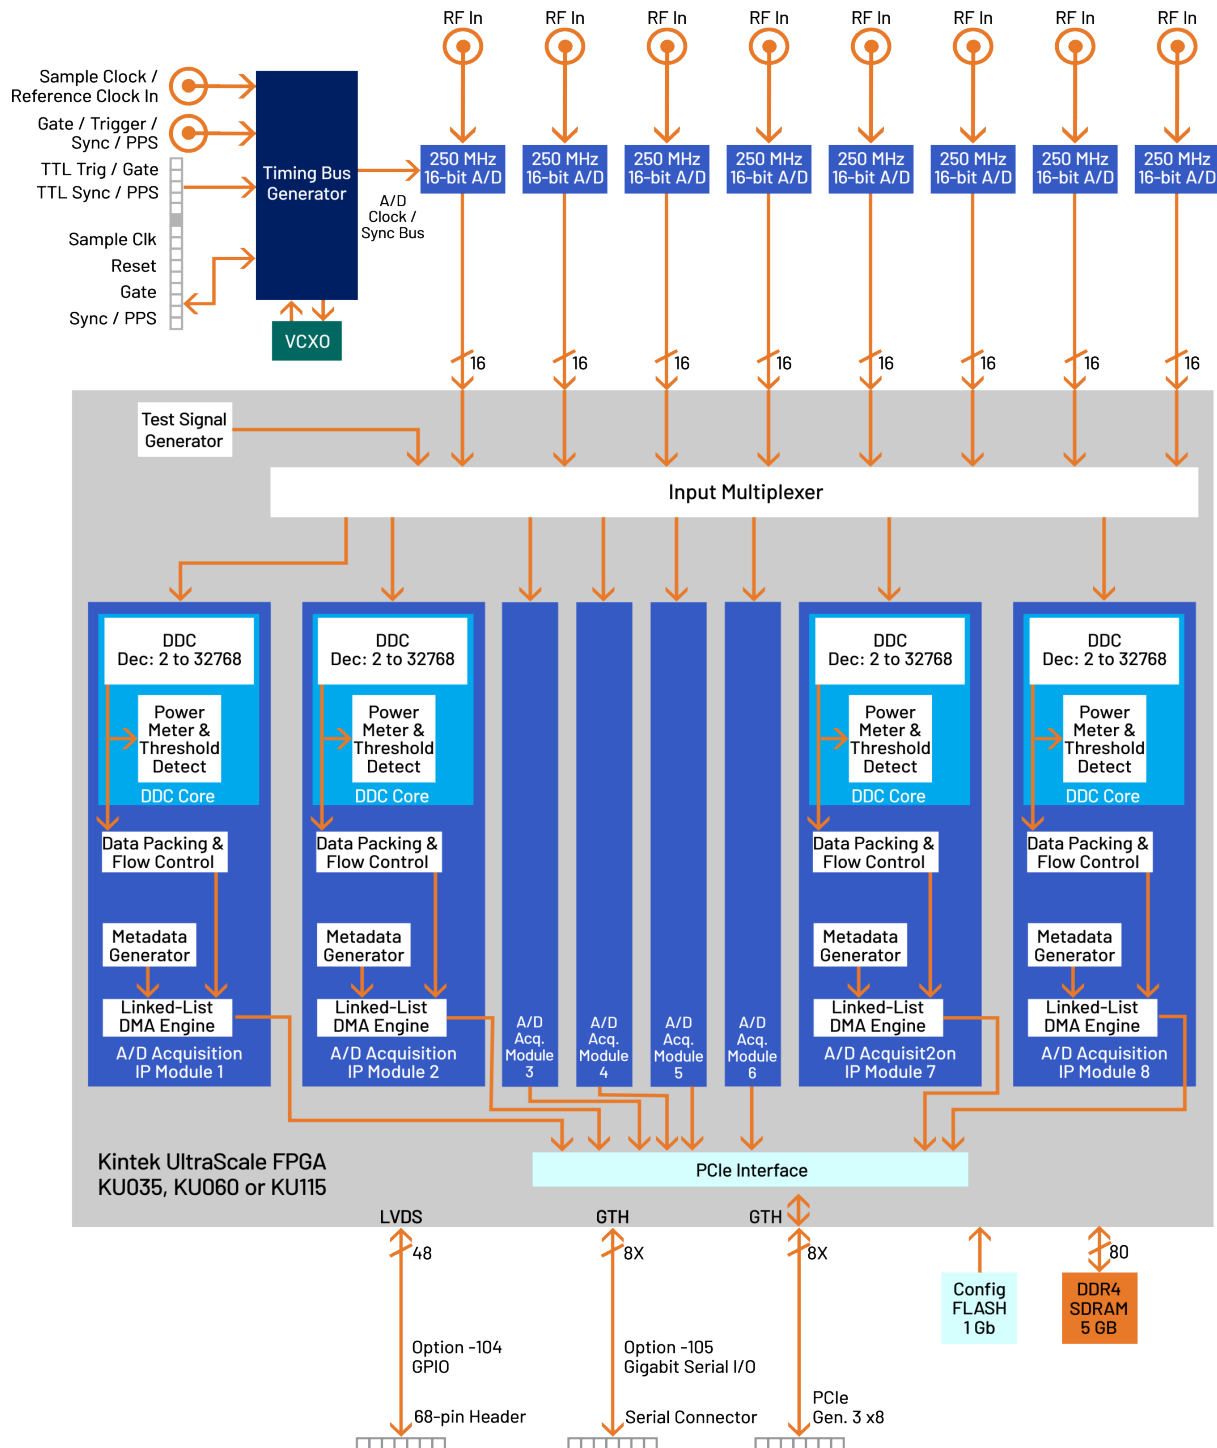

- Xilinx® Kintex® UltraScale™ FPGA
- Eight 250 MHz 16-bit A/Ds
- Eight multiband DDCs (digital downconverters)
- 5 GB of 2400 MHz DDR4 SDRAM
- Sample clock synchronization to an external reference
- LVPECL clock/sync bus for multiboard synchronization
- PCI Express interface (Gen. 1, 2 & 3) up to x8
- Optional LVDS port and gigabit serial connections for custom FPGA I/O

THE JADE ARCHITECTURE

Evolved from the proven designs of Mercury's Cobalt® and Onyx® families, Jade® raises the processing performance while lowering the overall power requirements by building on the Xilinx family of Kintex UltraScale FPGAs. As the central feature of the board architecture, the FPGA has access to all data and control paths, enabling factory-installed functions as well as providing an ideal platform for user-created intellectual property (IP). Each member of the Jade family is delivered with factory-installed applications ideally matched to the board's analog interfaces.

78131 BLOCK DIAGRAM

Click on a block for more information.

XILINX KINTEX ULTRASCALE FPGAS

Depending on the requirements of the processing task, the Kintex Ultrascale can be selected from a range of FPGAs: KU035 through KU115. The KU115 features 5520 DSP48E2 slices and is ideal for modulation/demodulation, encoding/decoding, encryption/decryption, and channelization of the signals between transmission and reception. For applications not requiring large DSP resources or logic, a lower-cost FPGA can be installed.

A/D CONVERTER STAGE

The board's analog interface accepts eight analog HF or IF inputs on front panel MMCX connectors with transformer coupling into four Texas Instruments ADS42LB69 dual 250 MHz, 16 bit A/D converters.

The digital outputs are delivered into the Kintex UltraScale FPGA for signal-processing or routing to other module resources.

A/D ACQUISITION IP MODULES

The 78131 features eight A/D Acquisition IP Modules for easily capturing and moving data. Each IP module can receive data from any of the eight A/Ds or a test signal generator.

Each IP module has an associated DMA engine for easily moving A/D data through the PCIe interface. These powerful linked-list DMA engines are capable of a unique Acquisition Gate Driven mode. In this mode, the length of a transfer performed by a link definition need not be known prior to data acquisition; rather, it is governed by the length of the acquisition gate. This is extremely useful in applications where an external gate drives acquisition and the exact length of that gate is not known or is likely to vary.

For each transfer, the DMA engine can automatically construct metadata packets containing A/D channel ID, a sample-accurate time stamp and data length information. These actions simplify the host processor's job of identifying and executing on the data.

DDC IP CORES

Within each A/D Acquisition IP Module is a powerful DDC IP core. Because of the flexible input routing of the A/D Acquisition IP Modules, many different configurations can be achieved including one A/D driving all eight DDCs or each of the eight A/Ds driving its own DDC.

Each DDC has an independent 32-bit tuning frequency setting that ranges from DC to f_s , where f_s is the A/D sampling frequency. Each DDC can have its own unique decimation setting, supporting as many as eight different output bandwidths for the board. Decimations can

be programmed from 2 to 32,768 providing a wide range to satisfy most applications.

The decimating filter for each DDC accepts a unique set of user-supplied 18-bit coefficients. The 80% default filters deliver an output bandwidth of $0.8 \cdot f_s / N$, where N is the decimation setting. The rejection of adjacent-band components within the 80% output bandwidth is better than 100 dB. Each DDC delivers a complex output stream consisting of 24-bit I + 24-bit Q or 16-bit I + 16-bit Q samples at a rate of f_s / N .

CLOCKING AND SYNCHRONIZATION

An internal timing bus provides all timing and synchronization required by the A/D converters. It includes a clock, a sync and gate or trigger signals. An on-board clock generator receives an external sample clock from the front panel MMCX connector. This clock can be used directly by the A/D or divided by a built-in clock synthesizer circuit.

In an alternate mode, the sample clock can be sourced from an on-board programmable voltage-controlled crystal oscillator. In this mode, the front panel MMCX connector can be used to provide a 10 MHz reference clock for synchronizing the internal oscillator.

A front panel 12-pin LVPECL Clock/Sync connector allows multiple boards to be synchronized. In the slave mode, it accepts LVPECL inputs that drive the clock, sync and gate signals. In the master mode, the LVPECL bus can drive the timing signals for synchronizing multiple boards.

Up to three additional boards can be driven from the LVPECL bus master, supporting synchronous sampling and sync functions across all connected boards.

MEMORY RESOURCES

The 78131 architecture supports a 5 GB bank of DDR4 SDRAM memory. User-installed IP along with the Mercury-supplied DDR4 controller core within the FPGA can take advantage of the memory for custom applications.

PCI EXPRESS INTERFACE

The 78131 includes an industry-standard interface fully compliant with PCI Express Gen. 1, 2 and 3 bus specifications. Supporting PCIe links up to x8, the interface includes multiple DMA controllers for efficient transfers to and from the board.

NAVIGATOR DESIGN SUITE

For applications that require specialized functions, the Navigator Design Suite allows customers to fully utilize the processing power of the FPGA. It includes an FPGA design kit for integrating custom IP into the factory-shipped design, and a board support package for creating host applications for control of all hardware and FPGA IP-based functions.

The **Navigator FPGA Design Kit (FDK)** for the Xilinx® Vivado® Design Suite includes the complete Vivado project folder for each Jade product with all design files for the factory-installed FPGA IP. Vivado's IP Integrator is a graphical design entry tool that visually presents the complete block diagram of all IP blocks so the developer can access every component of the Jade design. Developers can quickly import, delete, and modify IP blocks and change interconnection paths using simple mouse operations.

Navigator FDK includes an IP core library of more than 100 functions representing a wealth of resources for DSP, data formatting, timing, and streaming operations, all based on the powerful AXI4 standard. Multilevel documentation for each IP core is a mouse click away, and fully consistent with Xilinx IP cores.

The **Navigator Board Support Package (BSP)** provides software support for Jade boards. It enables operational control of all hardware functions on the board and IP functions in the FPGA. The BSP structure is designed to complement the functions of the FDK by maintaining a one-to-one relationship between FDK and BSP components. For each IP block found in the FDK library, a matching software module can be found in the BSP. This organization simplifies the creation and editing of software to support new IP functions and modifications to existing IP cores.

Navigator IP FPGA Design viewed in IP Integrator

NAVIGATOR BOARD SUPPORT PACKAGE

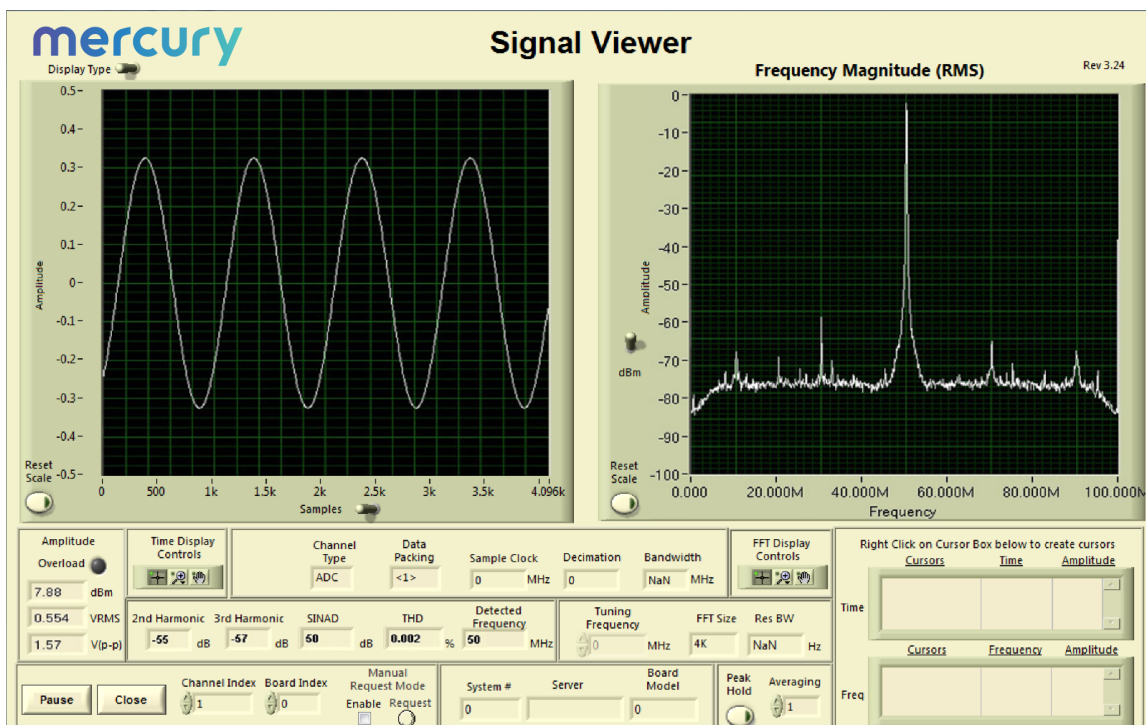

NAVIGATOR FPGA DESIGN KIT

Because all Jade boards are shipped with a full suite of built-in IP functions and numerous software examples, new applications can be developed by building on the provided software examples or built entirely new with the BSP extensive libraries. All BSP libraries are provided as C-language source for full access and code transparency.

The Navigator BSP includes the **Signal Viewer**, a full-featured analysis tool, that displays data in time and frequency domains. Built-in measurement functions display 2nd and 3rd harmonics, THD (total harmonic distortion), and SINAD (signal to noise and distortion). Interactive cursors allow users to mark data points and instantly calculate amplitude and frequency of displayed signals. With the Signal Viewer users can install the Jade board and Navigator BSP and start viewing analog signals immediately.

FRONT PANEL CONNECTIONS

The front panel includes ten MMCX coaxial connectors for clock, trigger, and analog input signals, and a 12-pin Sync Bus input/output connector. The front panel also includes seven LED indicators.

- **Analog Input Connectors:** Eight MMCX coaxial connectors, labeled **In 1, 2, 3, 4, 5, 6, 7, and 8**: one for each ADC input channel.
- **ADC Overload LED:** There is one red **OV** (overload) LED for all ADC inputs. This LED indicates either an overload detection in one of the ADS42LB69s, or an ADC FIFO overrun.
- **Sync Bus Connector:** The 12-pin μ Sync front panel connector, labeled **SYNC/GATE**, provides clock, sync and gate input/output pins for the Low Voltage Positive Emitter Coupled Local (LVPECL) Sync Bus.
- **Trigger Input Connector:** One MMCX coaxial connector, labeled **TRIG**, for input of an external trigger.
- **PPS LED:** The green **PPS** LED illuminates when a valid PPS signal is detected. The LED will blink at the rate of the PPS signal.
- **Clock Input Connector:** One MMCX coaxial connector, labeled **CLK**, for input of an external sample clock.
- **Clock LED:** The green **CLK** LED illuminates when a valid sample clock signal is detected. If the LED is not illuminated, no clock has been detected and no data from the input stream can be processed.
- **Master LED:** The yellow **MAS** LED illuminates when this 71131 is the Sync Bus Master. When only a single 71131 is used, it must be a Master.
- **Link LED:** The green **LNK** LED indicates the link speed when a valid link has been established over the PCIe interface, as follows: Gen 1 - LED blinks slowly (less than once per second); Gen 2 - LED blinks about once per second; Gen 3 - LED will be constantly on.
- **User LED:** The green **USR** LED is for user applications.
- **Over Temperature LED:** The red **TMP** LED illuminates when an over-temperature or over-voltage condition is indicated by any of the temperature/voltage sensors on the 71131 PCB.

SPECIFICATIONS

Front Panel Analog Signal Inputs

Input Type: Transformer-coupled, front panel female MMCX connectors

Transformer Type: Coil Craft WBC4-6TLB

Full Scale Input: +4 dBm into 50 ohms

3 dB Passband: 300 kHz to 700 MHz

A/D Converters

Type: Texas Instruments ADS42LB69

Sampling Rate: 10 MHz to 250 MHz

Resolution: 16 bits

Digital Downconverters

Quantity: Eight channels

Decimation Range: 2x to 32,768x in three stages of 2x to 32x

LO Tuning Freq. Resolution: 32 bits, 0 to f_s

LO SFDR: >108 dB

Phase Offset Resolution: 32 bits, 0 to 360 degrees

FIR Filter: 18-bit coefficients, 24-bit output, user-programmable coefficients

Default Filter Set: 80% bandwidth, <0.3 dB passband ripple, >100 dB stopband attenuation

Sample Clock Sources

On-board clock synthesizer

Clock Synthesizer

Clock Source: Selectable from on-board programmable VCXO (10 to 810 MHz), front panel external clock or LVPECL timing bus

Synchronization: VCXO can be locked to an external 4 to 180 MHz PLL system reference, typically 10 MHz

Clock Dividers: External clock or VCXO can be divided by 1, 2, 3, 4, 6, 8, or 16 for the A/D clock

External Clock

Type: Front panel female MMCX connector, sine wave, 0 to +10 dBm, AC-coupled, 50 ohms, accepts 10 to 800 MHz divider input clock or PLL system reference

Timing Bus

12-pin connector LVPECL bus includes, clock/sync/gate/PPS inputs and outputs; TTL signal for gate/trigger and sync/PPS inputs

External Trigger Input

Type: Front panel female MMCX connector, LVTTTL

Function: Programmable functions include: trigger, gate, sync and PPS

Field Programmable Gate Array

- Standard: Xilinx Kintex UltraScale XCKU035-2
- Option -084: Xilinx Kintex UltraScale XCKU060-2
- Option -087: Xilinx Kintex UltraScale XCKU115-2

Custom I/O

- Option -104: connects 24 pairs of LVDS signals from the FPGA to a 68-pin DIL ribbon-cable header on the PCIe board for custom I/O.
- Option -105: connects one 8X gigabit serial link from the FPGA to an 8X gigabit serial connector along the top edge of the PCIe board.

Memory

Type: DDR4 SDRAM

Size: 5 GB

Speed: 1200 MHz (2400 MHz DDR)

PCI-Express Interface

PCI Express Bus: Gen. 1, 2 or 3: x4 or x8

Environmental

Standard: L0 (air-cooled)

- Operating Temp: 0° to 50° C
- Storage Temp: -20° to 90° C
- Relative Humidity: 0 to 95%, non-condensing

Option -702: L2 (air-cooled)

- Operating Temp: -20° to 65° C
- Storage Temp: -40° to 100° C
- Relative Humidity: 0 to 95%, non-condensing

Physical

Dimensions: Half-length PCIe card

- Depth: 181.10 mm (7.13 in)
- Height: 111.25 mm (4.38 in)

Weight: Approximately 14 oz (400 grams)

ORDERING INFORMATION

Model	Description
78131	8-channel 250 MHz A/D with DDCs and Kintex UltraScale FPGA - PCIe

Options:

-084	XCKU060-2 FPGA
-087	XCKU115-2 FPGA
-104	LVDS FPGA I/O
-105	Gigabit serial FPGA I/O
-702	Air-cooled, Level 2

Contact Mercury for compatible option combinations and complete specifications of rugged and conduction-cooled versions. Options may change, so be sure to contact Mercury for the latest information.

ACCESSORY PRODUCTS

Model	Description
7892	High-Speed Synchronizer & Distribution Board

DEVELOPMENT SYSTEMS

Mercury offers development systems for Jade products. They come with all pre-tested software and hardware ready for immediate operation. These systems are intended to save engineers and system integrators the time and expense associated with building and testing a development system that ensures optimum performance of Jade boards. Please [contact Mercury](#) to configure a system that matches your requirements.

FORM FACTORS

Jade products are available in standard form factors including 3U VPX, 6U VPX, PCIe, and XMC. The Jade Model 71131 XMC (8-Channel 250 MHz A/D with DDC, Kintex UltraScale FPGA) has the following variants:

Model	
52131	3U VPX board (single XMC)
54131	3U VPX board (single XMC with optical/backplane RF)
57131	6U VPX board (single XMC)
58131	6U VPX board (dual XMC)
71131	XMC module
78131	PCIe board (single XMC)
