Mercury's BuiltSAFE™ products bring the highest level of flight safety assurance to aerospace and defense applications. Our proven, reusable Design Assurance Level (DAL) certified artifacts for mission computing, avionics, networking and datalink comms processing save time and cost while decreasing risk.

The BuiltSAFE RIOV-2478 is a 3U conduction-cooled, OpenVPX Single Board Computer for airborne applications. It is specifically designed for the most demanding applications, combining high compute and flight-worthiness capabilities within harsh environments.

The BuiltSAFE RIOV-2478 is a second generation 3U OpenVPX PowerPC compute platform. It combines a multi-core processor with modern interconnect high-speed links and an onboard crosspoint switch. It features a QorIQ P3/P4 processor designed for combined data and control plane processing. The processor design is suited for applications, which are highly compute-intensive, I/O intensive or both. The crosspoint switch permits flexibility of the payload profile configuration in accordance with VITA standards enabling support of PCIe, GbE and 10GbE over OpenVPX and XMC.

An Advanced Board Management Controller (aBMC) is implemented for event logging and other supporting tasks.
