Maximum DC voltage on output and I/O pins is V_{CC} + 0.5 V. During voltage transitions, outputs may overshoot to V_{CC} + 2.0 V for periods up to 20 ns. See .
- Minimum DC input voltage on A9, OE#, RESET# pins is -0.5V. During voltage transitions, A9, OE#, RESET# pins may overshoot V_{SS} to -2.0 V for periods of up to 20 ns. See Maximum DC input voltage on A9, OE#, and RESET# is 12.5 V which may overshoot to 13.5 V for periods up to 20 ns.

Stresses greater than those listed in this section may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure of the device to absolute maximum rating conditions for extended periods may affect device reliability.
